

INTRODUCING TRIONDA

THE OFFICIAL MATCH BALL FOR THE FIFA WORLD
CUP 2026™, CRAFTED FOR BEST-IN-CLASS
PERFORMANCE ON THE BIGGEST STAGE.

ALL-NEW CONNECTED BALL TECHNOLOGY

TRIONDA features an updated iteration of adidas' Connected Ball Technology*. The 500Hz inertial measurement unit (IMU) motion sensor chip now sits inside a specially created layer in one of the four panels.

COUNTERWEIGHTS FOR BALL STABILITY

To ensure continued stability and balance when TRIONDA is in-flight, counterweights are strategically placed across the three other panels, to offset the new side-mounted chip.

FOUR-PANEL CONSTRUCTION AND DEBOSSING DETAIL

The brand-new four-panel construction is designed with intentionally deep seams, which combine with strategically placed debossed detailing, to create a ball surface that produces optimal in-flight stability by ensuring there is sufficient and evenly distributed drag, as it travels through the air.

EMBOSSED COUNTRY ICONS

Country icons - including a Star for the USA, Maple Leaf for Canada and Eagle for Mexico - are embossed all over the matte base of TRIONDA, providing elevated grip on the ball, when dribbling in wet or humid conditions.

* The on-pitch version of TRIONDA with adidas Connected Ball Technology, is limited to professional play only, and is not available to consumers.
