10. Tolling Group - Reported financials
13. Appendix

Summary

Flower Infrastructure Technologies MidCo AB (publ) was incorporated in November 2025, and the Group (as defined on page 3) has, from an accounting and legal structure perspective, only existed since February 2026.

As a result, the reported financial information is very limited. To provide a more meaningful overview of the Group's performance, pro forma financial information for Q3 2026 and Q3 2025 has been prepared and is presented on page 3 and page 5-6.

Financial performance of operating assets

The third quarter delivered pro forma revenues of SEK 38.1 million, compared with SEK 41.1 million in the third quarter of 2025, a decrease of SEK 3.0 million or 7%.

The comparison period already reflected our updated optimization strategy and our entry into the mFRR market. Lower capacity market prices during the quarter led us to allocate a larger share of the portfolio to energy arbitrage and activation services. Despite this, our portfolio outperformed the relevant benchmark by 51% during the quarter.

Pro forma EBITDA amounted to SEK 22.8 million (SEK 28.9 million), corresponding to a margin of approximately 60%. The margin was affected by the shift in revenue mix, as activations and energy arbitrage carry higher grid fees than capacity markets, where assets are compensated for keeping capacity available. COGS increased to SEK 12.7 million (SEK 9.8 million). For the first nine months, revenues increased by 31% to SEK 107.4 million (SEK 82.2 million), and EBITDA increased by 50% to SEK 62.7 million (SEK 41.7 million).

Reported and pro forma profitability was partly impacted by costs related to projects currently under construction, which are expected to contribute to future operational capacity and earnings.

Projects under Construction

All three Swedish battery projects under construction, Skolmyra (10 MW / 20 MWh), Södertälje (20 MW / 40 MWh) and Pajkölen (40 MW / 80 MWh), are in the final stages of installation and commissioning. Equipment deliveries are completed, and final electrical works and commissioning activities are well advanced.

Skolmyra and Södertälje are expected to reach commercial operation in November 2026. Södertälje will initially operate at 13.1 MW, as a switchgear component in one AC block is being replaced by the supplier, with full capacity expected to follow once the replacement has been completed and tested (Q4 2026). Pajkölen is expected to follow during the fourth quarter of 2026. Once commissioned, the assets will initially trade on energy markets while prequalification for ancillary service markets is finalized.

In total, the three projects add 70 MW / 140 MWh, bringing Flower's fully owned operational BESS capacity in Sweden to approximately 137 MW. Construction is progressing well, and we are pleased to see the portfolio now moving into the operational phase.

Financial summary – Pro forma

	Quarter		Year to date	
	Jul-25	Jul-26	Jan-25	Jan-26
SEKm	**Sep-25**	**Sep-26**	**Sep-25**	**Sep-26**
Revenue	41.1	38.1	82.2	107.4
Growth, %	*n.a*	*(7)%*	*n.a*	*31 %*
Adjusted EBITDA	28.9	22.8	41.7	62.7
Adjusted EBITDA margin, %	*70%*	*60%*	*51%*	*58%*
KPIs	**Sep-25**	**Sep-26**	**Sep-25**	**Sep-26**
ProForma EBITDA (annualised)	n.a	108.7	n.a	108.7
Cash and cash equivalents	n.a	43.9	n.a	43.9
Net debt	n.a	(656.1)	n.a	(656.1)
Net debt / EBITDA adjusted	n.a	6.0	n.a	6.0

Note: i) Pro forma EBITDA (annualized) refers to all operational SPVs ii) Net debt refers to total interest-bearing borrowings (non-current and current) and leasing liabilities less cash and cash equivalents for the Bond Group.

Comment from CEO

The third quarter of 2026 was another good quarter for Flower, with solid revenues and strong profitability in a softer market environment. Pro forma revenues amounted to SEK 38.1 million, below the SEK 41.1 million recorded in an exceptionally strong third quarter of 2025. Pro forma EBITDA was SEK 22.8 million, corresponding to a healthy margin of approximately 60%. Year to date, our growth remains strong, with revenues up 31% to SEK 107.4 million and EBITDA up 50% to SEK 62.7 million.

Capacity market prices were lower during the quarter. In response, we allocated a larger share of the portfolio to energy arbitrage and activation services. This flexibility to shift between markets as conditions change is central to our optimization platform. Despite the softer market, our portfolio outperformed the relevant benchmark by 51% during the quarter. The changed revenue mix had some effect on margins, as activations and energy arbitrage carry higher grid fees than capacity markets.

Looking into the winter months, we expect continued uncertainty in the global geopolitical environment to contribute to elevated and more volatile electricity prices across Europe. Combined with seasonally higher demand, this is expected to create more frequent and larger price movements, which increases the value of flexible capacity such as battery storage.

We are also very close to an important milestone for Flower. Our three Swedish battery projects under construction, Skolmyra, Södertälje and Pajkölen, are in the final stages of commissioning. Skolmyra and Södertälje are expected to reach commercial operation in November, with Pajkölen expected to follow during the fourth quarter of 2026. Together, they add 70 MW / 140 MWh of capacity, bringing our fully owned operational battery capacity in Sweden to approximately 137 MW. This is roughly double the operational capacity at the end of the second quarter.

Once operational, the batteries will initially be optimized across the energy markets. Following prequalification approval from Svenska kraftnät, we expect them to participate across all applicable ancillary service markets. This will give us access to a broader set of revenue streams and further increase the value our optimization platform can generate from each asset.

Looking ahead, our focus is on bringing the new capacity safely into operation, completing prequalification and continuing to refine our optimization strategies. With a substantially larger operational portfolio entering the winter season, we are well positioned to capture the opportunities ahead and look forward to closing the year with strong momentum.

John Diklev

Group structure

The Group's bond structure is designed to consolidate the operational energy storage assets and related project companies under Flower Infrastructure Technologies MidCo AB (publ) (the "Issuer"), which acts as the issuing entity under the SEK 700 million senior secured bond. Refer to the structure to the right for the relevant group definitions.

Cash flows generated from the underlying assets, including revenues from ancillary services markets, optimization activities and, over time, tolling agreements, are upstreamed through the structure and ultimately support the Issuer's debt service obligations.

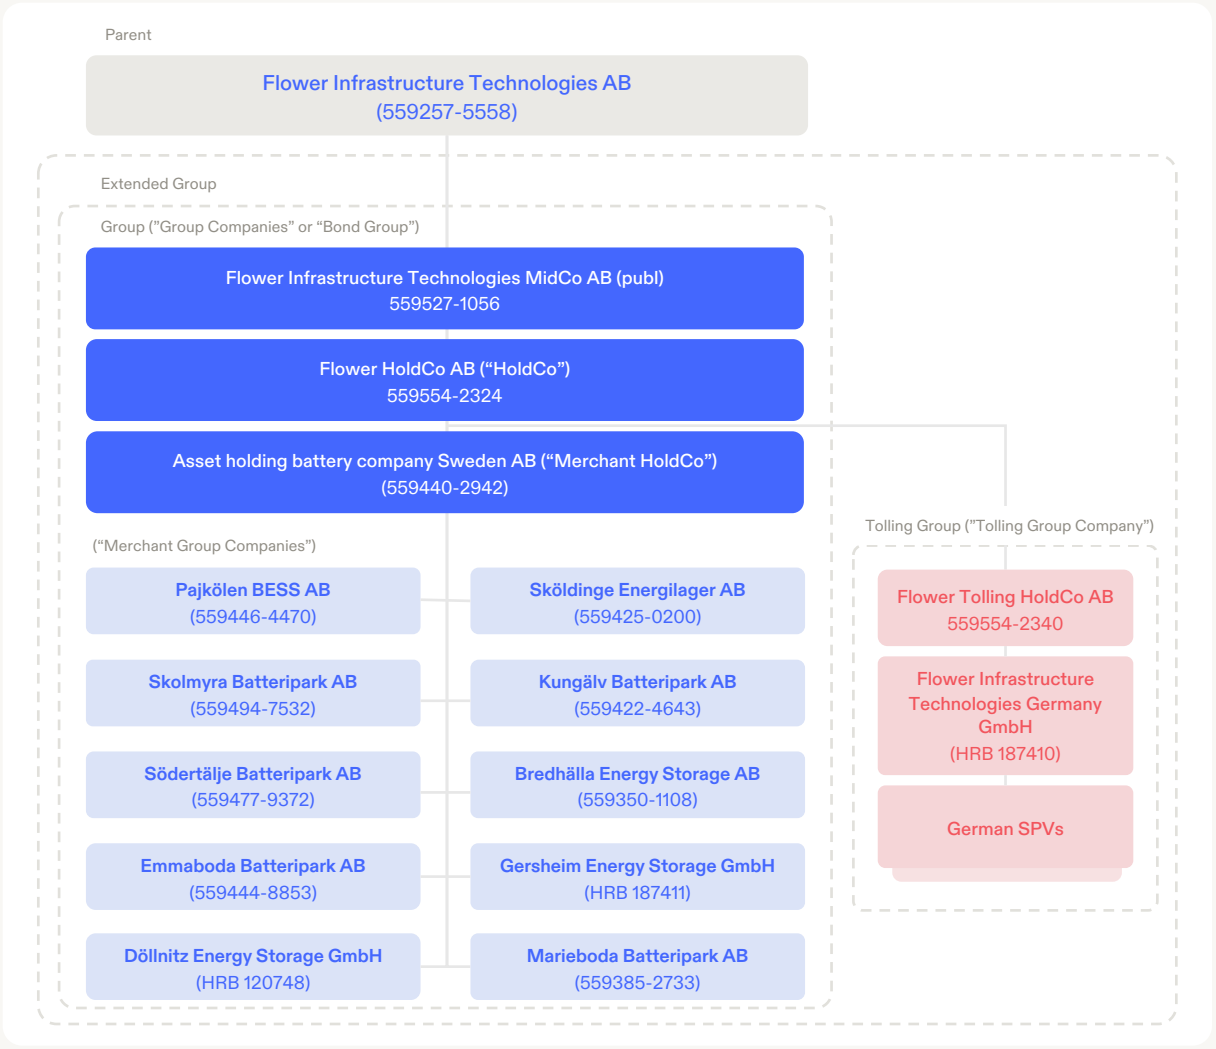

Reported and pro forma financial information

For the purposes of this report, the reported financial statements comprise all companies within the Extended Group for the full quarter, i.e. no adjustments have been made to reflect only the period following the transaction.

The pro forma financial information presented in this report reflects the financial performance of the Merchant Group companies, i.e. the operating entities holding battery energy storage assets (both operational and under construction). Holding companies within the structure are not included in the pro forma financial information.

Financial information relating to the Tolling Group is presented separately later in this report.

Group and Extended Group structure

Business overview

The Extended Group owns and develops battery energy storage systems, including both operational assets and projects under construction.

In total, the portfolio in the Group represents 210 MW of battery energy storage capacity, of which 67 MW is operational and 143 MW is currently Ready to Build or under construction.

Operational BESS assets	Size (MW)	Size (MWh)
Bredhälla	42.5	55.6
Kungälv	14.8	14.8
Sköldinge	4.0	4.0
Emmaboda	2.0	2.0
Marieboda	3.3	3.3
Ready-to-Build and Assets under construction		
Pajkölen	40	80
Södertälje	20	40
Skolmyra	10	20
Gersheim	10	20
Döllnitz*	63	257
Total	**209.6**	**496.7**

Note: *Döllnitz divested on 17 November 2026

The assets are currently actively optimized across multiple electricity markets, including ancillary services markets and wholesale power markets (arbitrage), in order to maximize value from the flexibility provided by the battery systems.

Optimization services, asset management and construction-related services are provided by the parent company (Flower Infrastructure Technologies AB) under contractual agreements, allowing the Extended Group to benefit from the parent company's technology platform and operational expertise while maintaining a clear separation between asset ownership and services.

Significant events during the quarter

There were no significant events during the quarter

Significant events after the end of the quarter

On 13 October 2026, as part of an intra-group restructuring, Flower Tolling HoldCo AB, part of the Tolling Group, transferred all shares in Flower Infrastructure Technologies Germany GmbH (HRB 187410), including its wholly owned subsidiary FIT Bergedorf Energy Storage GmbH (HRB 190499), to Blitz D26-52 GmbH (to be renamed Flower BESS Germany GmbH) (HRB 112790), a subsidiary within the Flower German Tolling AB (publ) (559589-0160) group. The transfer consolidates the German assets within Flower's dedicated German structure. The transaction was carried out on arm's length terms and at fair market value. The total consideration amounted to SEK 217.5 million and was paid in cash.

On 17 November 2026, Asset Holding Battery Company Sweden AB, a subsidiary of Flower Infrastructure Technologies MidCo AB (publ), divested the 63 MW / 257 MWh Döllnitz battery energy storage project in Saxony-Anhalt, Germany, to Flower German Tolling AB (publ). The transaction was carried out on arm's length terms and at fair market value. The total consideration amounted to EUR 10.6 million and was paid in cash.

Pro forma adjustments

The pro forma financial information presented in this report reflects the financial performance of the Merchant Group companies, i.e., the operating entities holding battery energy storage assets (both operational and under construction). Holding companies within the structure are not included in the pro forma financial information.

Certain adjustments have been made in order to better reflect the financial profile of the bond structure. These include adjustments to:

- optimization revenue is reported gross of the optimization fee. The optimization fee is paid to the parent company, Flower Infrastructure Technologies AB, and is recognised in COGS
- the removal of interest expenses related to intercompany loans between Flower Infrastructure Technologies AB and entities for the period prior to the bond issuance, as these arrangements are not part of the final bond structure (removed from financial net).

The pro forma financial information is presented for illustrative purposes only and does not represent the actual historical financial performance of the bond group.

Key accounting principles

General accounting principles

The consolidated financial statements of Flower Infrastructure Technologies MidCo AB (publ) have been prepared in accordance with the Swedish Annual Accounts Act (Årsredovisningslagen) and the K3 framework (BFNAR 2012:1).

Functional currency and presentation currency

The Company's financial statements are presented in Swedish kronor (SEK) which is the Parent Company's functional currency. All amounts are presented in million Swedish kronor (SEKm), unless otherwise indicated. Rounding differences may occur.

Use of estimates and judgements

The preparation of the financial statements in accordance with K3 (BFNAR 2012:1) requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, income and expenses, as well as related disclosures in the financial statements. These estimates and assumptions are based on management's best knowledge at the reporting date. Actual results may differ from these estimates.

Revenue and costs

Revenue is recognized at the fair value of the consideration received or receivable. Revenue is recognized in the period in which the services are performed or delivered. Where invoicing occurs after the reporting period, revenue is accrued and recognized in the period to which it relates. Any discounts granted are deducted from revenue. The Group's revenue primarily consists of optimization income from battery energy storage systems (BESS), generated through participation in ancillary services markets and electricity market arbitrage.

Costs are recognized in the period in which they are incurred and in accordance with the matching principle, meaning that costs directly attributable to generating revenue are recognized in the same period as the related revenue. Operating costs primarily consist of grid fees, maintenance costs, optimization fees, and other operating expenses related to the battery energy storage assets.

Non-current assets

Tangible and intangible non-current assets are recognized at acquisition cost less accumulated depreciation and any impairment losses.

Property, plant and equipment are divided into significant components when the components have materially different useful lives. The acquisition cost includes, in addition to the purchase price, costs that are directly attributable to bringing the asset to the location and condition necessary for it to operate as intended.

Costs related to dismantling, removal or restoration of the site are not included in the acquisition cost of property, plant and equipment. Instead, a provision is recognized progressively over the useful life of the asset.

The depreciable amount consists of the acquisition cost less an estimated residual value, where this is considered significant. Depreciation is applied on a straight-line basis over the expected useful life of the asset and is recognized as an expense in the income statement.

The following useful lives are applied:

Asset category:	Useful life:
Buildings	20 years
Grid connection	5 years
Batteries	15 years
Inverters	20 years
Transformers	25 years

Asset acquisitions

Acquisitions of companies that do not constitute a business are accounted for as asset acquisitions. In such cases, the purchase consideration is allocated to the identifiable assets and liabilities acquired based on their relative fair values at the acquisition date. No goodwill is recognized in connection with asset acquisitions. Transaction costs that are directly attributable to the acquisition are included in the acquisition cost of the acquired assets. Where the acquired company primarily holds development rights, permits, or battery energy storage projects under construction, the acquisition cost is recognized as part of property, plant and equipment or assets under construction.

Goodwill

Goodwill arises when the acquisition cost of a business exceeds the fair value of the identifiable assets acquired and liabilities assumed. Goodwill is recognized as an intangible asset and is measured at acquisition cost less accumulated amortization and any impairment losses.

Goodwill is amortized on a straight-line basis over its estimated useful life, which reflects the period during which the economic benefits from the acquired business are expected to arise. The amortization period is 10 years, unless a shorter useful life can be reliably determined.

Goodwill is reviewed for impairment whenever there are indications that the carrying amount may not be recoverable.

Parent group:

The Parent Company ("Flower Infrastructure Technologies AB, 559257-5558") prepares its annual report in accordance with the Swedish Annual Accounts Act (1995:1554) and BFNAR 2012:1 Annual Report and Consolidated Financial Statements (K3).

Related Party Transactions:

The Parent company, Flower Infrastructure Technologies AB, provides optimization, construction-related, and other operational services to all battery parks within the Extended Group under contractual arrangements. These services include trading, optimization, project development, construction management, and operational oversight through Flower's proprietary technology platform, while maintaining a clear separation between asset ownership and service operations within the Group structure.
